COLORS AND SPECIES

OAK

[Quercus spp.]

Hard, heavy and very resistant, it is sought after for its characteristics and appearance. Its wood, with a straight grain and coarse texture is very rigid and porous.

COLORS AND SPECIES

URBAN WHITE OAK (available on veneer)

N-500
Natural - 10°

S-606
Caoua - 10°

S-638
Tuxedo - 10°

S-763
Umber

CUSTOM COLOR

 Because wood is a natural material, some wood species may show slight variations in density, color and grain.

MAPLE

[Acer spp.]

Its color ranges from creamy white to light brown. Maple wood is heavy, hard and very resistant. It sometimes has flecks that make it even more attractive.

COLORS AND SPECIES

Milk Chocolate

S-655
Soft Gray

CUSTOM COLOR

 Because wood is a natural material, some wood species may show slight variations in density, color and grain.

ASH

[Fraxinus]

Ash has large cathedral grains because of its flat cut. It is a wood that exhibits a rich texture due to its unique grain. It displays an interesting contrast when a stain is applied to it.

CUSTOM COLOR

 Because wood is a natural material, some wood species may show slight variations in density, color and grain.

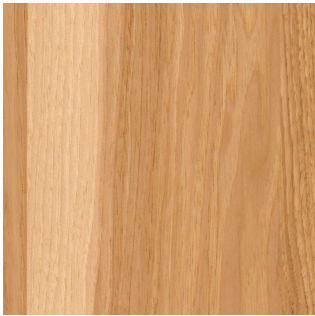

HICKORY

[Carya spp.]

Dynamic two-tone blond wood that can feature cathedral grain. The pale sapwood contrasts with the pinkish brown tones of the heartwood. This warm species has a slight knotty appearance.

COLORS AND SPECIES

HICKORY FC (available on veneer)

N-500
Natural

CUSTOM COLOR

 Because wood is a natural material, some wood species may show slight variations in density, color and grain.

BIRCH

[Betula spp.]

Pinkish to reddish-brown wood. Distinct paler sapwood. Well marked rings. Wood with a moderate degree of shrinkage, easy to machine. Good structural properties. Birch, also known as wild cherry, has a finer grain than that of orchard trees.

COLORS AND SPECIES

TECHNICAL SPECIFICATIONS

TECHNICAL SPECIFICATIONS

FINISHING STEPS

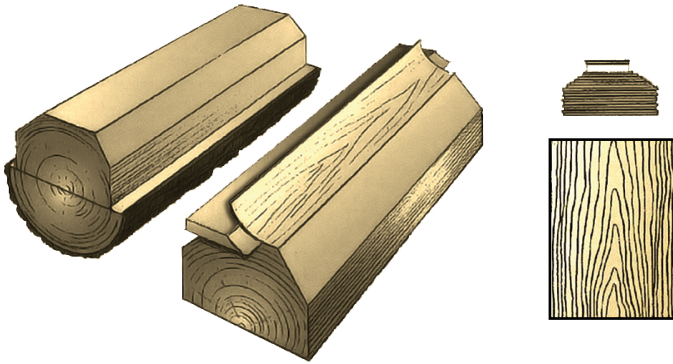

- Classification by wood color and grade
- Wood sanding (220)
- Smoothing sander
- Inspection of wood color uniformity according to grade
- Various physical options.
In the example: hammering and termite holes
- Application of the wiping stain
- Random adjustment of the stain (shader)
- Inspection of stain uniformity
- Application of the clear sealer
- Finishing sanding
- Uniform application of a colored stain sealer
- Color uniformity inspection
- Color options
- Inspection of option uniformity
- Application of the high quality clear topcoat
- Final inspection of the complete project before shipping

TECHNICAL SPECIFICATIONS

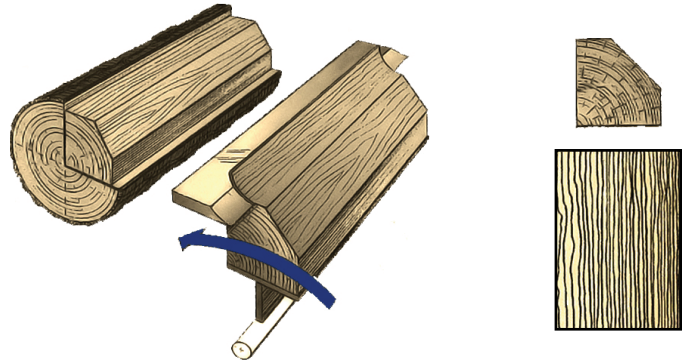

TYPES OF VENEER CUT

FC FLAT CUT OR PLAIN SLICED

The knife slices the log along its entire length from a parallel centerline. Plain slicing gives a grain pattern called "cathedral".

RC RIFT CUT

Rift slicing is obtained by positioning the knife at an angle of 15° with respect to the growth rings, in order to obtain linear grains. This method minimizes the appearance of flakes in certain species, such as white oak.

TECHNICAL SPECIFICATIONS

 In a Laminate project, the requested finished side(s) will also be finished on the inside (both sides of specified panel). The other interior parts of the cabinet will be the same finish as the construction material (ex. white linen furniture board).

 Note that European laminate boxes are always finished inside and out. However, it is important to specify the finished sides of your cabinet when necessary.
